RE: Application for Engineer/ Requisition no.: 32790

</div>

Dear ANZ Recruitment Team,

I am very excited to apply for the Engineer role with ANZPlus. The opportunity to work on innovative projects within an engineering-driven organization that focuses on improving customers' financial well-being strongly resonates with my passion for technology and creating well-engineered solutions.

As an IT Graduate from the University of Melbourne, I have acquired a solid foundation in computer science and software development. Additionally, I am currently participating in the Full Stack Web Development Coding Bootcamp at Monash University, where I am gaining hands-on experience in building dynamic and responsive web applications. Through this bootcamp, I have developed a deep interest in backend development and database management, particularly in working with data to derive valuable insights and enhance user experiences.

Having reviewed the job posting and researched ANZPlus, I am impressed by the organization's commitment to leveraging cutting-edge technologies and fostering a best-practice engineering culture. The Open Banking initiative, with its focus on empowering customers to control their data sharing, aligns perfectly with my values and career aspirations.

My skills and experiences match the qualifications outlined in the job description.

- **Communication:** I have demonstrated excellent verbal communication skills in Bootcamp by actively participating in classes, and contributing to group projects ideations, discussions, and stand-ups. Furthermore, I have gained excellent written skills while writing reports, documentation, user stories, meeting agendas, and essays in University and Bootcamp.

- **Collaboration skill:** During my final year at University and my current Bootcamp, I worked and am working with several diverse groups to complete assignments and projects. I worked closely with my teammates to share ideas and delegate tasks. We worked effectively together and successfully met all submission and delivery deadlines.

- **Adaptability, Diversity, and Inclusivity:** In my previous role as an event waitress, I worked with different teams in various locations for many events, such as birthdays, graduations, and fundraising. Effectively communicating with team members from different countries and backgrounds to provide the best services to the guests has led me to enhance my ability to embrace diversity and be inclusive. Moreover, working in different locations and events has increased my ability to adapt to new environments.

- **Coding skills:** I have proficiency in multiple backend programming languages, including Java, Node.js and Python, which I have honed through coursework and personal projects. Furthermore, my involvement in the coding bootcamp has provided me with hands-on experience in developing

APIs and working with databases. This exposure has solidified my understanding of data structures, query optimization, and data modelling.

With my passion for problem-solving and new technologies, I am keen to join ANZPlus to leverage the technical and non-technical skills I have gained throughout my studies and part-time jobs to contribute to a positive and successful team. With my growth mindset and ability to learn new skills, I believe I will become a valuable team member for ANZ in the future.

Thank you for taking the time to consider my application. I have attached my resume for your review, which provides further details on my qualifications. I would welcome the opportunity to discuss how my skills and experiences align with the position. I am available at your convenience.

Yours sincerely,

May Myat Noe Htet
