Dear Drew and Horsell Technology Team,

I hope this email finds you well. I am writing to inform you that I have completed the assignment as per the requirements. However, I encountered an issue after deploying the app, resulting in internal server errors after uploading the files. Unfortunately, due to time constraints, I won't be able to debug the deployment further.

I would like to clarify that the app is functioning on my local device, and I have provided a link to the deployed app along with a demo video recorded from my local environment for your review.

I must admit that both Flask and Azure are new to me, and I made an earnest effort to learn and implement them within the given. I apologize if the outcome does not meet the expectations, given my limited experience with these technologies.

In the assignment, I chose to use Python for both the front-end and back-end development. Although I am familiar with React for front-end development, integrating Python as a backend was a new experience for me. Time constraints compelled me to use Python for both aspects, but I intend to improve my skills in integrating Python and React in the future.

Thank you for providing me with this opportunity to participate in the selection process. I genuinely appreciate your time and consideration.

If you have any further questions or require additional information, please do not hesitate to reach out to me. I am more than happy to provide any clarification you may need.

Thank you once again for this opportunity.

Sincerely,

May Myat Noe Htet
